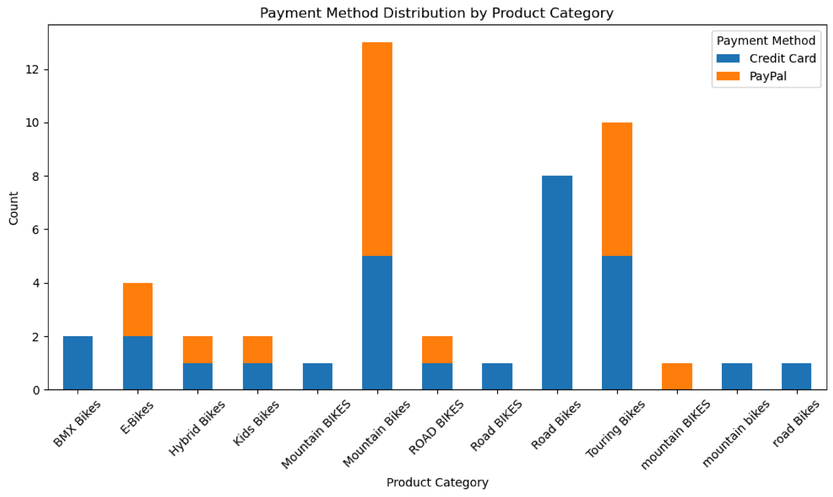
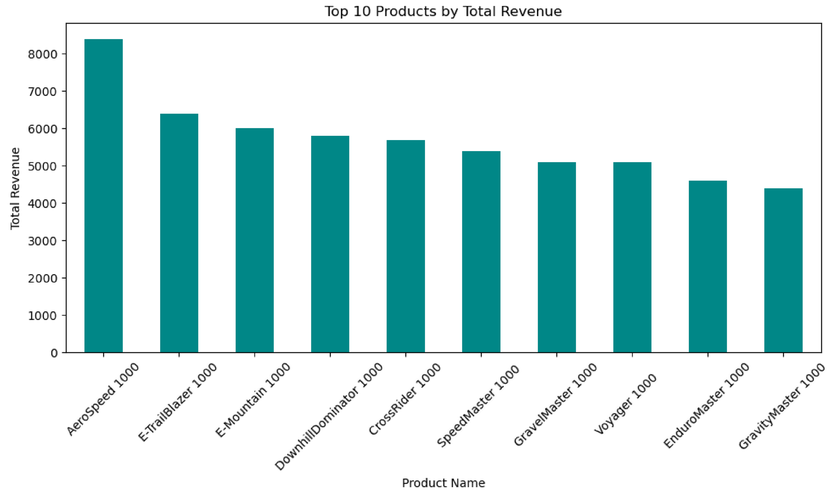
Bike Sales Performance Dashboard



Mountain Bikes Lead in Volume and Split Payment Preference

Mountain Bikes account for the highest order count (13), nearly evenly split between Credit Card and PayPal.

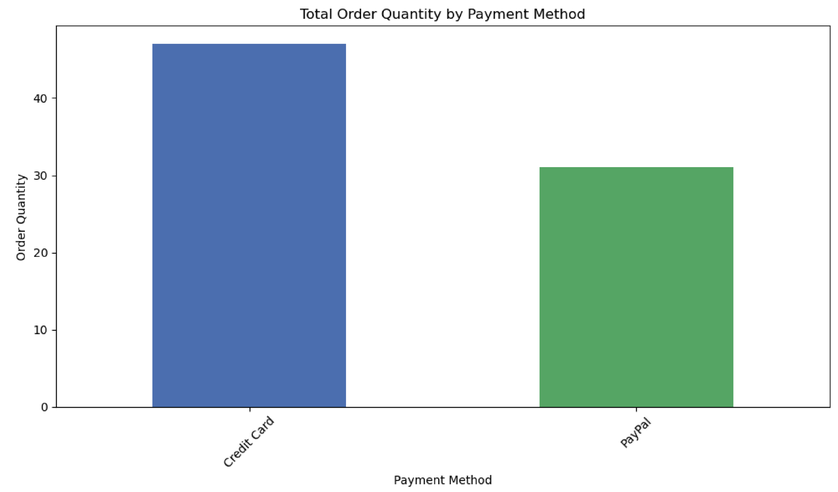
Road Bikes buyers strongly favor Credit Card (8 of 8 orders), while Mountain and Touring Bikes see more balanced payment splits.



AeroSpeed 1000 Tops the Charts

AeroSpeed 1000 generated ~$8,400 in revenue, which is the highest of any single product, over $2,000 ahead of the next closest (E-TrailBlazer 1000 at ~$6,400).

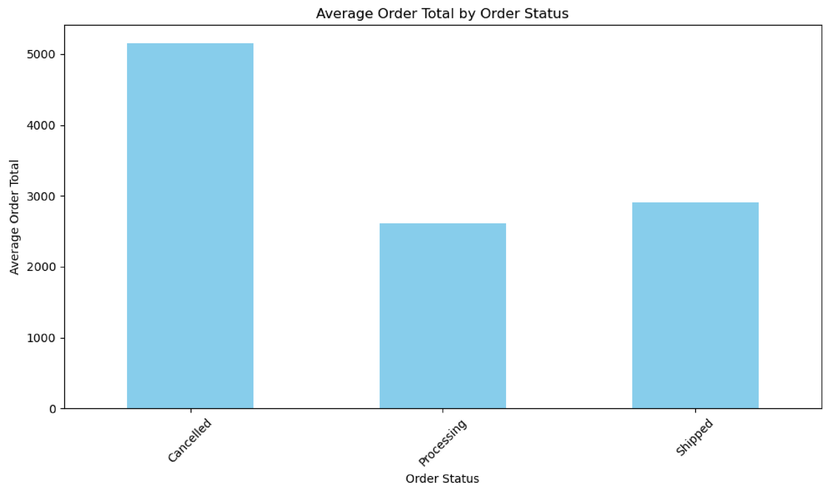
The top 5 products (AeroSpeed, E-TrailBlazer, E-Mountain, DownhillDominator, CrossRider) each brought in over $5,700, showing strong demand concentrated in performance and electric bike lines.



Credit Card Dominates Order Volume

Credit Card orders (47 units) outpace PayPal (31 units) by roughly 1.5x.

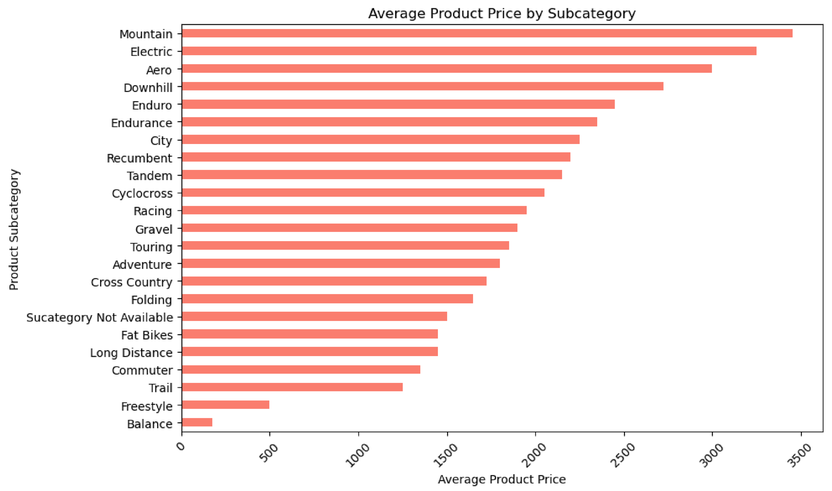
Credit Card is the preferred payment method for the majority of transactions.



Cancelled Orders Have the Highest Average Value

Cancelled orders average ~$5,150, which nearly double Shipped (~$2,900) and almost 2x Processing (~$2,600).

Higher value orders may carry greater cancellation risk, worth investigating for causes such as payment issues, stock problems, or buyer hesitation on big ticket items.



Mountain & Electric Bikes Command Premium Pricing

Mountain bikes average ~$3,450, which is the highest of any subcategory, followed by Electric (~$3,250) and Aero (~$3,000).

Entry-level categories like Balance and Freestyle bikes sit well under $500, highlighting a wide price spread across the product line.

Datasets for the first two projects are sourced from Microsoft's courses on Coursera, called "Harnessing the Power of Data with Power BI".
